#### Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to teach or suggest the limitation of independent claims. The Applicant has claims a method of forecasting demand to automatically execute a forward contract.

Independent claim 1 discloses a method of supply chain optimization that accesses forecasted demand and automatically generates, negotiates, modifies and enforces a flexible trade contract or a forward contract.

Independent claim 15 discloses a method of supply chain optimization that accesses forecasted demand and automatically generates, negotiates, modifies and enforces a flexible trade contract or a forward contract.

The following prior art references have been deemed most relevant to the allowed claim(s):

Schmidt et al. (EP 0770 967) teaches a supply chain system that includes a demand and supply reconciliation process reconciling production, sales and inventory and reconciling a top-down forecast with a bottom-up forecast where an expert based model is used for the bottom-up forecast. Schmidt also describes a VMR strategic planning tool that evaluates various “service contract options” for “direct replenishment” (page 28 line 38 & 54 respectively). While this reference describes “service contract options” in review the examiner believes this is different than a “forward contract” executed on a stock exchange as defined by the applicants definition of “flexible trade contracts.” In addition Schmidt is silent about anything happening automatically and without user intervention.

Herz et al (US Patent 5,754,938) teaches automatic negotiation between computers but does not have a specific system for forecasting demand and executing a forward contract.

Garman (EP 0790568A1) discloses a system and method for determination of incremental value at risk for securities trading. A proposed trade is examined for its incremental impact on the VaR measure of the trading portfolio, without further reference to the existing portfolio held by an institution and without the need to re-determine the combined portfolio's VaR measure for each candidate trade.

Maes (non-patnet literature article "Agents that buy and sell") teaches software agent technologies that automatically without user interaction negotiate and execute transactions but is silent about the type of transaction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
